Product Description

CID Severe Root Grapple

The Severe Root Grapple is constructed for machines over 80 HP, featuring strength and durability like no other. It handles more material, weight, and power than our other grapples. The Severe Root Grapple features 1/2" continuous bottom tines, 3/4" top tines, and a frame constructed with 4" square tubing. It also includes enclosed hydraulic cylinders and shafts for added protection. The rod and cylinder covers come standard, with diamond plating giving it a tough, durable look. This grapple can effortlessly pick up heavy logs and large amounts of debris, making it perfect for big storm cleanups and natural disasters.
