Product Description

DIC FORESTRY DISC MULCHER

The Forestry Disc Mulcher can quickly mulch 4" material and effortlessly cut trees up to 8" in diameter. It features a 44" (or 60") diameter cutting area with a machined and statically balanced disc. Available with two motor options: a 100 CC for 20-30 GPM or a 150 CC for 30-44 GPM. The disc holds 30+ mulching teeth (depending on size), providing ample power for your toughest clearing needs. A case drain is required for this attachment. A closed forestry style cab is strongly recommended for use with this mulcher! Teeth are four sided beaver style and are replacable. We do not recommend using anywhere near people, windows, or animals.
