Product Description

IronCraft 6100 Series: 16" One Bottom Moldboard Plow

The **IronCraft 6116** is a professional-grade **16" One Bottom Moldboard Plow** engineered for tractors ranging from **18 to 50 horsepower**. This heavy-duty primary tillage tool is the ideal solution for hobby farms, nurseries, home gardens, and planting wildlife food plots.

Designed to effectively turn over and aerate the soil, the 6100 Series excels at burying crop residue and preparing a clean seedbed. With **shear bolt protection** and high-strength construction, this plow offers the reliability needed for breaking new ground or maintaining established plots.

Key Features & Performance Benefits

- **Replaceable Wear Parts:** Features both a replaceable 16" plow share and moldboard, ensuring your equipment remains sharp and effective for years of service.
- **Primary Tillage Excellence:** Specifically designed to invert the soil profile, burying surface trash and weed seeds while bringing fresh nutrients to the surface.
- **Shear Bolt Protection:** Built-in safety mechanism protects your tractor and the plow frame from damage if an underground obstruction like a large rock or root is struck.
- **Optimal Soil Aeration:** The deep-turning action improves soil structure and drainage, creating the perfect environment for root development.

Technical Specifications (Model 6116)

- **Plow Share Length:** 16 Inches
- **Horsepower Requirement:** 18 - 50 Engine HP
- **Total Weight:** 231 lbs for reliable soil penetration
- **Product Family:** 6100 Series Professional Tillage
- **Protection:** Integrated Shear Bolt System

Versatile Agricultural Applications

- **Hobby Farms & Nurseries:** Ideal for small-scale crop production and maintaining specialized nursery rows.
- **Wildlife Food Plots:** The perfect size for maneuvering in tight wooded areas to establish deer and

turkey food plots.

- **Garden Preparation:** Easily breaks up compacted garden soil and sod to prepare for spring planting.
 - **Residue Management:** Efficiently buries corn stalks, wheat stubble, or thick grass to improve organic matter in the soil.
-
