Product Description

IronCraft 6200 Series: 12" Two-Bottom Moldboard Plow

The **IronCraft 6212** is a high-efficiency **12-inch Two-Bottom Moldboard Plow** designed for tractors between **18 and 50 horsepower**. This dual-furrow tillage tool is the perfect choice for hobby farms, nurseries, and large-scale gardens, allowing you to turn over twice as much soil in a single pass compared to single-bottom models.

Engineered for effective primary tillage, the 6200 Series excels at soil aeration and burying organic residue to create a nutrient-rich seedbed. Whether you are establishing wildlife food plots or preparing a nursery row, this plow features **shear bolt protection** and replaceable wear parts for long-term field reliability.

Key Features & Performance Benefits

- **Dual-Furrow Efficiency:** Two 12" bottoms allow for faster soil inversion, cutting your field time in half for primary tillage tasks.
- **Advanced Soil Aeration:** Designed to deep-turn soil, burying surface weeds and crop residue while improving soil structure for better root growth.
- **Replaceable Wear Components:** Equipped with a replaceable share and moldboard, ensuring your plow stays sharp and maintains a clean furrow over years of use.
- **Safety-First Design:** Integrated shear bolt protection prevents frame and tractor damage if the plow strikes hidden rocks or thick roots.

Technical Specifications (Model 6212)

- **Plow Share Length:** 12 Inches (per bottom)
- **Configuration:** Two-Bottom (Dual Furrow)
- **Horsepower Requirement:** 18 - 50 Engine HP
- **Operating Weight:** 358 lbs for consistent soil penetration
- **Product Family:** 6200 Series Heavy-Duty Tillage

Versatile Farming & Land Management Applications

- **Wildlife Food Plots:** Rapidly prepare large areas for deer and turkey food plots by turning over sod and burying brush.

- **Hobby Farm Primary Tillage:** Break new ground or refresh existing fields to improve drainage and nutrient availability.
 - **Nursery & Garden Prep:** Ideal for creating uniform, aerated soil for professional-grade nursery planting and large vegetable gardens.
 - **Residue Burial:** Effectively manage last season's crop stalks and organic matter by incorporating them deep into the soil profile.
-
